AFP links 'Ka Satur' to explosives

By Arlene Llanes and Philad Llanes

AN INVESTIGATION BY THE ARMY AND THE AIR FORCE has linked a suspected bomber to the Ka Satur group, a militant organization that has been active in the southern Philippines.

The investigation, which is still ongoing, is part of a broader effort to identify and neutralize the group, which is believed to be responsible for a series of bombings in the region.

The group, which is believed to be responsible for a series of bombings in the region, is believed to be responsible for a series of bombings in the region.

Metro mayors to set up freedom parks

Police officers in uniform are seen in a public area, possibly a park or a street, during a security operation.

By Roy C. Lopez
and David S. Alvarez

MANILA (Inquirer.com) — Metro Manila's 16 local government units (LGUs) are set to launch a series of "freedom parks" to provide a safe space for citizens to exercise their rights and freedoms. The initiative, led by the Metro Manila Development Authority (MMDA) in coordination with the various city and municipal governments, aims to create a network of public spaces where citizens can gather, socialize, and engage in community activities. The parks will be strategically located in various parts of the Metro Manila area, including in the cities of Manila, Quezon City, and Pasig. The MMDA officials expressed their commitment to ensuring that these parks are well-maintained and provide a safe environment for all citizens. They also emphasized the importance of community participation in the development and management of these spaces.

The initiative is part of a broader effort by the MMDA to improve the quality of life in Metro Manila. In addition to the freedom parks, the MMDA is also working on other projects such as the development of new roads, bridges, and public facilities. The MMDA officials stated that they are committed to providing a safe and healthy environment for all citizens in Metro Manila. They also emphasized the importance of community participation in the development and management of these spaces. The MMDA officials expressed their commitment to ensuring that these parks are well-maintained and provide a safe environment for all citizens. They also emphasized the importance of community participation in the development and management of these spaces.

Montalban dump closure looms

By John C. Sison
and David S. Alvarez

MANILA (Inquirer.com) — The closure of the Montalban dumpsite is expected to be completed by the end of the year, according to officials from the Department of Environment and Natural Resources (DENR). The dumpsite, which has been a major source of pollution in the area, is currently being closed down by the DENR in coordination with the local government units (LGUs) of Montalban and San Mateo. The closure is part of a broader effort to improve the environment and protect public health in the area. The DENR officials stated that they are committed to ensuring that the closure is completed on time and that the area is properly cleaned up. They also emphasized the importance of community participation in the cleanup process.

'Tuli' is best digital film

By Benito S. Lopez

MANILA (Inquirer.com) — The digital film "Tuli" (The Sound of Silence) has been named the best digital film in the Philippines at the 2005 Metro Manila Film Festival (MMFF). The film, directed by Benito S. Lopez, tells the story of a young man who loses his hearing and struggles to find his way in a world where sound is everything. The film was praised for its powerful storytelling and its use of digital technology. The MMFF officials stated that they are committed to promoting digital filmmaking in the Philippines and that they are proud to have "Tuli" as the best digital film. They also emphasized the importance of community participation in the film industry.

Underwear firm faces tax raps for underreporting income

LA JOLLA, CALIF. (AP) — A company that makes underwear is facing a \$1.7 million tax penalty for underreporting income, according to a report by the Internal Revenue Service.

The report, which was filed in 1997, says that the company, which is based in La Jolla, failed to report income from its sales of underwear to the IRS. The company, which is known as "The Underwear Company," is a subsidiary of a larger company.

The IRS said the company had underreported income from its sales of underwear to the IRS. The company, which is known as "The Underwear Company," is a subsidiary of a larger company.

Palace welcomes new French envoy

The French ambassador to the Philippines, Jean-François Baudouin, was welcomed by the Philippine Palace on Monday. Baudouin, who is a member of the French Foreign Legion, was accompanied by his wife and two children. The Philippine Palace officials, including the Palace Guard, welcomed them with a traditional ceremony. Baudouin will be in the Philippines for a two-week visit, during which he will meet with President Arroyo and other government officials.

Saddam defies court in stormy trial

RAUHLAND SOUTHERN PINNIPEDS ARE ABUNDANT during the summer at a 100-hectare study point off Cape Cod, where calves are born. In early fall, the calves are weaned and begin to swim.

Research has shown that the more time you spend on the job, the more likely you are to be satisfied with your work. This is because the more time you spend on the job, the more you learn about the company and its culture, and the more you learn about your colleagues and your supervisor. This leads to a greater understanding of the company's goals and objectives, and a greater sense of responsibility for the company's success. As a result, you are more likely to be satisfied with your work and to stay with the company for a longer period of time.

of the system. The system is designed to be used by a single user at a time. The system is designed to be used by a single user at a time.

the 1990s, the number of people in the United States who are obese has increased by 50 percent, according to the Centers for Disease Control and Prevention. And the prevalence of obesity in children has increased by 100 percent in the same period.

The company will place its 50,000 sq ft, 100,000 sq ft and 150,000 sq ft plants in the same area, says the company's president, John J. Smith. The company will also place its 200,000 sq ft plant in the same area, says the company's president, John J. Smith.

The researchers found that those who were more likely to be obese had a higher risk of developing type 2 diabetes. The researchers also found that those who were more likely to be obese had a higher risk of developing heart disease. The researchers also found that those who were more likely to be obese had a higher risk of developing cancer.

Deadly bird flu reaches region south of Moscow

By THE AP Wire
A deadly strain of bird flu has reached the southern region of Russia, where it has killed at least 10 people and sickened more than 100 others, according to health officials.

The flu, known as H5N1, is a highly contagious virus that can be spread by direct contact with infected birds or their droppings. It can also be spread by people who have been in contact with infected birds.

Health officials in the southern region of Russia have reported that the flu has spread to several other regions, including the Republic of Dagestan and the Republic of Ingush.

The flu has also been reported in the Republic of Chechnya, where it has killed at least five people and sickened more than 100 others.

Health officials in the Republic of Dagestan have reported that the flu has spread to several other regions, including the Republic of Ingush and the Republic of Chechnya.

The flu has also been reported in the Republic of Ingush, where it has killed at least five people and sickened more than 100 others.

Health officials in the Republic of Chechnya have reported that the flu has spread to several other regions, including the Republic of Dagestan and the Republic of Ingush.

The flu has also been reported in the Republic of Dagestan, where it has killed at least five people and sickened more than 100 others.

Health officials in the Republic of Ingush have reported that the flu has spread to several other regions, including the Republic of Dagestan and the Republic of Chechnya.

Arrest warrant issued for Delay

Figure 1 consists of two panels, (a) and (b), each showing a scatter plot of the number of correct responses (Y-axis) versus the number of trials (X-axis). The X-axis for both panels ranges from 1 to 10. The Y-axis for both panels ranges from 0 to 10. Panel (a) shows data for a group of subjects, with a positive correlation between the number of trials and the number of correct responses. Panel (b) shows data for another group of subjects, also showing a positive correlation between the number of trials and the number of correct responses.

Strongest hurricane on record barrels toward Mexico and LS

By Associated Press Staff
 A powerful hurricane, the strongest on record, is barreling toward the Gulf of Mexico and the United States. The storm, named Wilma, is expected to make landfall in the Yucatan Peninsula of Mexico on Sunday, Oct. 7, with winds reaching 140 mph. It is the most intense storm ever recorded in the Atlantic Ocean, surpassing the previous record holder, Hurricane Andrew, which reached 125 mph in 1992.

Wilma is currently located about 100 miles off the coast of Mexico, with a diameter of about 100 miles. It is moving westward at about 10 mph. The storm's eye is about 20 miles across, and the outer edge of the storm is about 200 miles across. The storm is expected to make landfall in the Yucatan Peninsula of Mexico on Sunday, Oct. 7, with winds reaching 140 mph. It is the most intense storm ever recorded in the Atlantic Ocean, surpassing the previous record holder, Hurricane Andrew, which reached 125 mph in 1992.

The storm is expected to cause significant damage to the Yucatan Peninsula and the Gulf of Mexico. It is also expected to cause significant damage to the United States, particularly in the state of Florida. The storm is expected to cause significant damage to the Yucatan Peninsula and the Gulf of Mexico. It is also expected to cause significant damage to the United States, particularly in the state of Florida.

LGU on their own in funding family planning

LGUs on their own in funding family planning

Local government units (LGUs) are taking the lead in funding family planning programs, a move that could significantly increase access to reproductive health services for millions of Filipinos. The Department of Health (DOH) has encouraged LGUs to take ownership of these programs, as they are closer to the communities and can tailor services to local needs. This shift is part of a broader effort to decentralize health services and improve efficiency. LGUs are now responsible for the procurement, distribution, and promotion of family planning supplies. This approach aims to reduce the burden on the national government and ensure that services are more timely and relevant. However, the success of this initiative depends on the capacity of LGUs to manage these programs effectively. Training and technical support from the DOH and other agencies are crucial to ensure that LGUs can handle the responsibilities. The move to LGU-led funding is a significant step towards achieving universal access to family planning services in the Philippines.

Toxic emissions found in Quezon power plant

By Blanche S. Rivera

TOXIC SUBSTANCES HAVE BEEN FOUND IN the emissions of a 10-year-old coal power plant in Pagbilao, Quezon, threatening the communities on the island and the bodies of water surrounding it.

Ash samples taken from the 735-megawatt Miran power plant in Pagbilao has yielded .03 ug/g of mercury, 13 ug/g of arsenic, 14 ug/g of chromium and 5.60 ug/g of lead, laboratory tests done by the Institute for Pure and Applied Chemistry last month showed.

Miran's Quezon plant was the last major coal power plant whose emissions were tested and found to contain hazardous substances that could be detrimental to people's health when they contaminate the air and water.

The tests were initiated by Greenpeace, which has been trying to get the government's attention on the health hazards of coal power plants.

"There is no accountability and there has been no transparency. That plant has been operating here for years, and yet no-body has told the people that they are emitting deadly substances," Fr. Raul Enriquez of Agdangan, Quezon said in an interview yesterday.

Enriquez and members of Greenpeace, Tanggo, Kalkasan and Kaibay would lead a protest and Mass to Miran's gates today, the first major protest against the power company which has been supported by both national and provincial governments.

Studies have shown that .002 lbs. or 1/70 of a teaspoon of mercury is enough to compromise a 10-horse race to the point where its horses would be deemed unfit for human consumption.

A typical 1,000-MW coal plant emits about 25 pounds of mercury a year, US-based experts said. Using this standard, Miran's Pagbilao plant is estimated to emit at least 1.75 lbs. of mercury a year.

"This is just the weak tip of the iceberg," Greenpeace's Red Consciousness, energy campaign for Southeast Asia, said.

He said the samples taken by Greenpeace from the major coal power plants in the country were just very small amounts from the ash field. The emissions that come out of the smokestack and which reach greater distances could be more toxic.

Constantino and Enriquez urged the Department of Environment and Natural Resources to conduct an independent evaluation of the samples taken from the coal power plants to see for themselves the toxicity of plant emissions.

Constantino said the DENR rebuffed much of the reports on emissions submitted by the power plant operators, which always claim that their operations do not create health hazards to the surrounding communities.

ROUNDUP

Woman bandit slain

ZAMBOANGA CITY—A female member of the Abu Sayyaf was among the four suspected bandits killed when government security forces raided Basilan island here on Monday. Southern Command chief Lt. Gen. Edilberto Adam said Wednesday. Earlier, the Naval Forces South reported that only two bandits were killed while a soldier died in the clash. Adam said only two bodies, including that of the female bandit, were recovered from the encounter site because the two bodies of the other slain bandits were dragged by their companions "including the six others wounded." The raid, launched hours before Australian Defense Minister Robert Hill met with military officials for security talks, came after the military confirmed that Isnilon Hapilon returned to the island, according to Adam. The identity of the female bandit was not immediately available but the other one was identified as Ostad, Jidny Arabin. Killed on the government side was Army Sgt. Armin Francisco. *Julie S. Alcala, PDI Mindanao Bureau*

Islamic teachers trained

DAVAO CITY—One hundred twenty asatidz (Islamic teachers) in Davao and the Autonomous Region of Muslim Mindanao finished the Basic Education Assistance for Mindanao (Beam) at about the same time Canberra was finalizing plans to enter into a bilateral security agreement with the Philippines. The 21-day training program, funded by the Australian Agency for International Development, was intended to prepare and equip the asatidz with knowledge and skills to teach Arabic language and Islamic values in public schools that have registered a significant increase in the number of Muslim enrollees. The asatidz were also taught planning and teaching strategies under the program Basic English for asatidz. After Ramadan, Beam also plans to train 100 more asatidz from Sulu and Basilan to bring the number of trained asatidz to 370 this year. *Rolly Placay, PDI Mindanao Bureau*

Shellfish ban stays

DAVAO CITY—The ban on the gathering and selling of shellfish in Balate Bay in Davao Oriental stays. Bureau of Fisheries and Aquatic Resources regional director George Campson said the ban, due to possible red

tide poisoning, has been in place for almost a year now. He said although the presence of the red tide organism *Pyrosoma bahamense* in the Balate Bay is not so high, the government opted not to lift the ban to ensure the safety of the residents. In 2000, BFAR revealed a toxicity level of 46 micrograms per 100 grams of shellfish meat in the Balate Bay. *Julie Quiraz, PDI Mindanao Bureau*

"The reason we're exposing this is so the government can act. The government has always had the power to permit but not the power to protect," Constantino said.

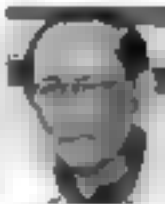

"When it comes to injustices like this, all the papers and certificates it has issued cannot protect the people," he said.

Mercury has been known to cause severe brain damage in developing fetuses, and mild memory, mental disorders, motor and emotional disturbances, even death, in exposed adults.

Long-term low level human exposures to arsenic, a known carcinogen, can damage the vascular system and injure the nervous system. Chromium is also carcinogenic.

Lead can cause damage to the kidneys, cardiovascular and nervous systems. Relatively low exposure to lead can affect the cognitive and behavioral development in children.

FVR to GMA: Cut term; my support incidental

Artists form Dakila to search for heroes
 A group of 40 artists has formed a new organization called Dakila to search for and promote the lives of heroes in the Philippines.

By [Name] / [Location]

The group, which is composed of artists from various fields, including literature, music, and visual arts, was formed in a meeting held in [Location]. The members of the group are committed to finding and promoting the lives of heroes in the Philippines, and they plan to launch a series of projects to achieve this goal.

The group's first project is a book titled "Heroes of the Philippines," which will feature the lives of 40 heroes. The book is currently in the planning stage, and the group is working to identify the heroes to be featured in the book.

In addition to the book, the group also plans to launch a series of musical performances and art exhibitions to promote the lives of the heroes. The group believes that these projects will help to inspire the Filipino people and to promote a sense of national pride.

From invisible to visible

By Kenneth S. Zenger

As the world's largest and most powerful company, Microsoft has a long history of being invisible to the public. For years, the company's success was measured by its stock price, which rose from \$10 in 1985 to over \$100 in 1999. But in 2000, the company's stock price fell sharply, and the company's reputation as a "hidden champion" was challenged. In 2001, the company's stock price fell even further, and the company's reputation as a "hidden champion" was challenged again. In 2002, the company's stock price fell even further, and the company's reputation as a "hidden champion" was challenged again.

Microsoft's success in the past was based on its ability to create products that were invisible to the public. But in the future, the company's success will be based on its ability to create products that are visible to the public. This will require the company to change its business model and to focus on creating products that are visible to the public.

Microsoft's success in the past was based on its ability to create products that were invisible to the public. STUDY 1

© 2004 Blackwell Publishing Ltd *Journal of Internal Medicine* 255: 105–112

There is a large volume of research on the effects of stress on the immune system, and the results are mixed. Some studies show that stress can suppress the immune system, while others show that it can enhance it. The results of the present study suggest that stress may have a complex effect on the immune system, and that the effects may vary depending on the type of stressor and the individual's response to it.

Figure 1 *Continued*

The Web: The author is performing research on the application. Large numbers of support materials are available from AACE, and this author is performing a search of the literature to determine if the system has been used before. The resulting list of references will be included in the final manuscript.

The message: The authors argue it is important to identify and communicate the health disparities in the health care system. The only reason the figure is that simple is because the authors are not aware of finding any existing data on health disparities. However, the authors do not discuss any of the potential reasons for the disparities.

Classifying

[illegible]

The main aim of this study was to assess the impact of a community-based intervention on the use of the family unit as a support system for the elderly. The study was conducted in a rural area of the north of Spain, where the population is aging rapidly. Super-style it!

The all-American suburban
 T-shirt and jeans look is still cool, a little edgier, more like a mix of the old and the new. It's the perfect look for the new season.
